WHY ARE RUSSIAN ATTACKS ON UKRAINE'S POWER STATIONS SO IMPORTANT?

WHAT'S HAPPENING?

Russia has attacked several power plants in Ukraine, even as the United States claimed that Russia and Ukraine had agreed to stop attacking energy sites. Ukrainian president Volodymyr Zelenskyy said Russian drones had struck power facilities in Kyiv and Kharkiv. Six people were reported killed in attacks across the country. Power stations are important military targets because electricity is needed for homes, hospitals, transport, factories and communications. Attacking them can make life harder for civilians and weaken a country's ability to continue fighting. The attacks are part of a wider war that began with Russia's full-scale invasion of Ukraine in February 2022. Ukraine's leaders say they are seeking clear agreements, but Russia had not confirmed the energy ceasefire claim when the report was published.

WHY IS THIS INTERESTING?

Wars are fought not only by soldiers on battlefields. Electricity, railways, factories, food supplies and communications can all become targets. This story helps explain how modern warfare affects ordinary people and why controlling energy has become an important part of international politics and military strategy.

THINK LIKE A HISTORIAN

"Why might an army attack power stations instead of only military bases?"
